RF Puncture Technology allows crossing even in challenging anatomy. Instantly probe and anchor into pulmonary vein without exchanges. Retain your curve and support consistent contact force† with the VersaCross™ Steerable Sheath. Consistent contact force of ablation catheters provides better therapeutic results.1

Shapeable dilator with true-to-form curve retention

Responsive, smooth, high-precision steering to confidently position your curve

Visibly confirm position of RF tip within dilator

Know where you are at all times with OMNIviz™ Technology

Track and mark RF tip position on your mapping system

Reliably locate your devices on ultrasound to reduce reliance on fluoroscopy

Visualize your entire solution on fluoroscopy

VersaCross™ RF Transseptal Solution
