KNOW MORE

- Large Inner Lumen Size
- Able to flush contrast agent
- Compatible with 2F EPstar catheters and 0.035” guidewires
- For superior vein access only

**EPstar Fixed Electrophysiology Catheters**

---

Coronary sinus angiography with contrast
Flexible and atraumatic distal tips facilitate confidence in coronary sinus access.

- Reach previously inaccessible areas of the coronary sinus
- Flexible and atraumatic tip
- Pacing even from distal electrode

**GO FURTHER**
- Pacing from all electrodes, including the distal electrode

**2F EXPLORE**
Deeper CS mapping has been used for:
- Idiopathic VTs
- Complex ATs
- Left WPW
- Mapping and Pacing in Vein of Marshall

**2F & 6F BE CONFIDENT**
Flexible and atraumatic distal tips facilitate confidence in coronary sinus access.

**2F PACE**
Pacing from all electrodes, including the distal electrode.

**6F CHOOSE**
Two electrode spacing choices, 2-8-2 or 5-5-5, to tailor your procedure.

**6F CONTROL**
Fully braided shaft, even under electrodes, allows greater maneuverability.
